

PRACTICAL BUSINESS HANDBOOK

TURN YOUR PC INTO A MONEY MACHINE

The 30-Day Blueprint to Building a €5,000/Month Online Business

SERVICES · DIGITAL PRODUCTS · 30-DAY PLAN · CROATIA SETUP

ZIRLANDIA MILKOVIC

Illustrative targets · Not legal, tax or financial advice · No income guarantee

About this book

Turn Your PC Into a Money Machine - The 30-Day Blueprint to Building a €5,000/Month Online Business

© 2026 Zirlandia Milkovic / GDPRGard. All rights reserved. First edition, October 2026. Facts about Croatian registration, tax and residence were checked on 31 October 2026.

Income disclaimer. All revenue figures, prices, targets and scenarios are illustrative planning examples, not forecasts, averages or promises. Results vary and may be zero.

Not legal advice. GDPR-related services described are documentation and compliance support. They are not legal representation, certified legal advice, a formal DPO appointment or a compliance certification.

Not tax, accounting or immigration advice. Rules, thresholds and amounts change and depend on personal status. Confirm every point in Chapter 13 with a Croatian accountant and the competent authority before acting.

Third-party tools change terms and prices; check current terms. Trademarks belong to their owners. Illustrative images were generated with AI and are decorative.

Read This First

What this book is, and what it is not

This book turns one personalised plan into a working manual. The plan was built from five answers: a monthly goal of **€5,000+**, a starting budget of **€0-50**, a preference for **services combined with digital products**, **3-4 hours a day**, and the priority of **building a sustainable business** rather than chasing quick money.

It does not promise that you will get rich, it does not describe passive income that works while you sleep, and it does not ask you to buy a course. Everything here can be started with free tools and a small, clearly limited budget. What it does give you is a sequence: what to offer, to whom, at what price, in which order, and how to measure whether it is working.

Important disclaimers

Income figures are illustrative. Every revenue number in this book (including the €1,164.80 starter scenario, the milestone chart and the €5,001 mix) is an example for planning. None is a forecast, an average or a promise. Many people who try a plan like this earn less than the examples, and some earn nothing for a while.

GDPR services are not legal advice. The services described are practical documentation and compliance-support work. They are not legal representation, not a formal DPO appointment, and not a certification of compliance. Templates must be adapted to each client's real processing activities and legal obligations.

Tax, registration and residence matters in Croatia change and depend on your personal status. Chapter 13 separates general guidance from points that a Croatian accountant or the competent authority must confirm. Nothing in this book is tax, accounting or immigration advice.

How to use this book

- Read Chapters 1-7 once, in one sitting. They set the strategy and the offers.
- Work Chapters 8-10 day by day. They are the operating manual: the 30-day plan, the daily schedule and the outreach system.
- Use Chapters 11-12 weekly. They keep your expectations honest and your numbers visible.
- Read Chapter 13 **before** you collect your first payment. Registration questions come first.
- Print the checklists, or copy them into your tracker. A checklist you do not tick is decoration.

The three rules that run the whole plan

1

Validate before you expand

Stop creating endless products with no customers. One offer that sells beats five that do not.

2

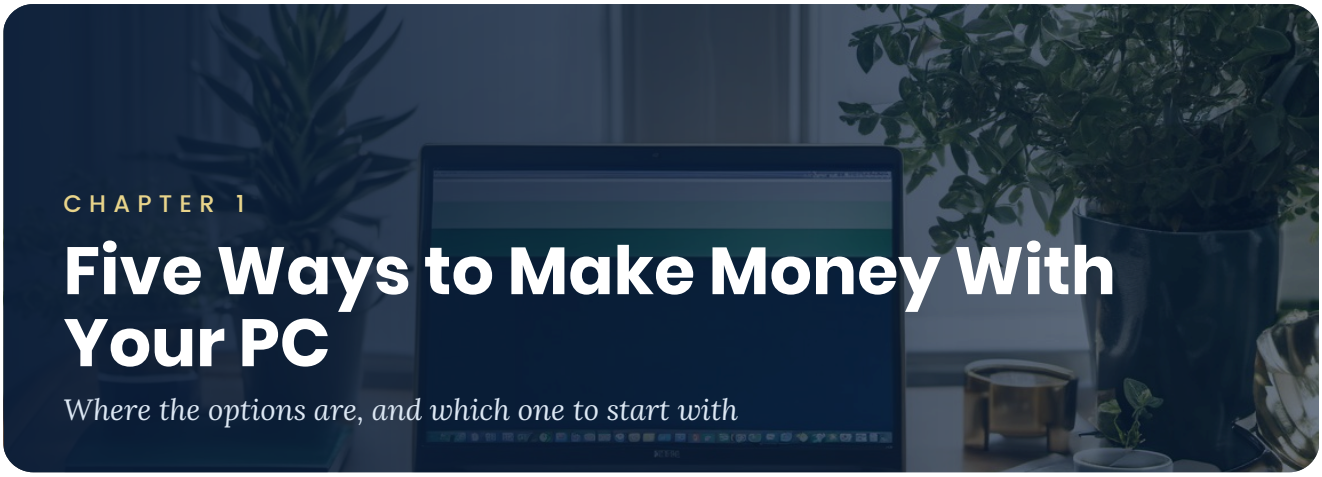

Sell before you automate

Do not spend three weeks building an AI tool nobody asked for. Manual first, software later.

3

Build an asset every day

Every conversation, template, article and product should make the business stronger tomorrow.

CHAPTER 1

Five Ways to Make Money With Your PC

Where the options are, and which one to start with

There are hundreds of 'online business ideas'. Almost all of them reduce to five realistic routes for someone with a PC, a skill set and a few hours a day. The table below compares them honestly, using the speed-to-first-revenue and the pricing ranges to test (not to guarantee).

Route	What it looks like	First revenue	Test pricing
1. GDPR services (first choice)	Privacy documentation, cookie/website checklists, retention templates, DPA packs, awareness training, documentation reviews for small European businesses	Days to weeks, depending on finding clients	€49-199 for small fixed-scope packages
2. Ebooks and digital products	GDPR guides, AI privacy handbooks, retention toolkits, cybersecurity checklists, editable templates; sold on Kindle and your own site	Days to weeks after publishing and marketing	€7.99-29.99 per product
3. Small AI online tools	Document generators, policy generators, privacy-notice checkers, PDF-to-Excel conversion	Usually longer: validation and development needed	€5-19/month or pay-per-use
4. Online freelancing	Virtual assistance, customer support, guest-relations consulting, AI-assisted research, formatting, web copy on platforms such as Upwork and Fiverr	Days to weeks	€15-35/hour
5. Content and affiliate	YouTube, affiliate recommendations, advertising, sponsored content	Usually slower	Use content to sell your own products first

Services
Fastest to first revenue
Days to weeks

Digital products
Scale: build once, sell again
Days to weeks after launch

Online tools
Recurring, but needs validation + build
Usually longest

Three revenue streams, ranked by how quickly each can produce a first paying customer.

Why routes 1 and 2 first

You already hold four assets most beginners do not: a background in hospitality and customer-service management, working knowledge of GDPR, an existing digital project (GDPRGard) with a website and free tools, and experience creating and publishing ebooks. Routes 1 and 2 use all four. Route 3 needs development time and proof of demand. Route 4 pays quickly but trades hours for money without building an asset. Route 5 is slow and works best later, feeding your own products.

The one-line strategy

Start with the revenue stream that can produce your **first paying customer** fastest, then let the other streams grow from the customers and content that stream creates.

CHAPTER 2

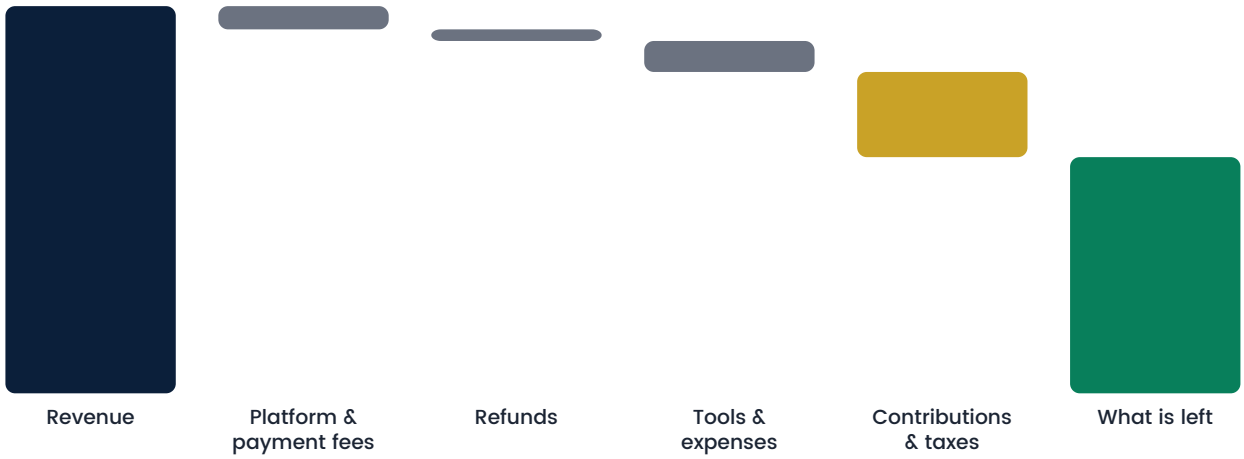

Your Blueprint at a Glance

The five answers behind the plan

Question	Your answer	What it means for the plan
Monthly target	€5,000+	A medium-term goal. Month 1 is for validation, not for reaching it.
Initial investment	€0-50	No ads, no paid courses, no premium subscriptions. Free tiers only.
Business model	Services + digital products	Services bring the larger cheques; products repeat the same work cheaply.
Time per day	3-4 hours	Roughly 90-120 working hours in the first month.
Priority	Sustainable business	Build one brand, one audience and repeatable processes.

Revenue is not profit

The plan targets **€5,000 of monthly revenue**. That is not the same as €5,000 of profit or take-home pay. Between revenue and what you keep sit platform and payment fees, refunds, tools, accounting, and in Croatia the mandatory contributions and taxes that depend on your registration form. A target of €5,000 in *profit* would require meaningfully higher revenue. Keep both numbers in view.

SCHEMATIC ONLY: proportions are invented to show the shape. Your real fees, expenses and Croatian contributions/taxes will differ.

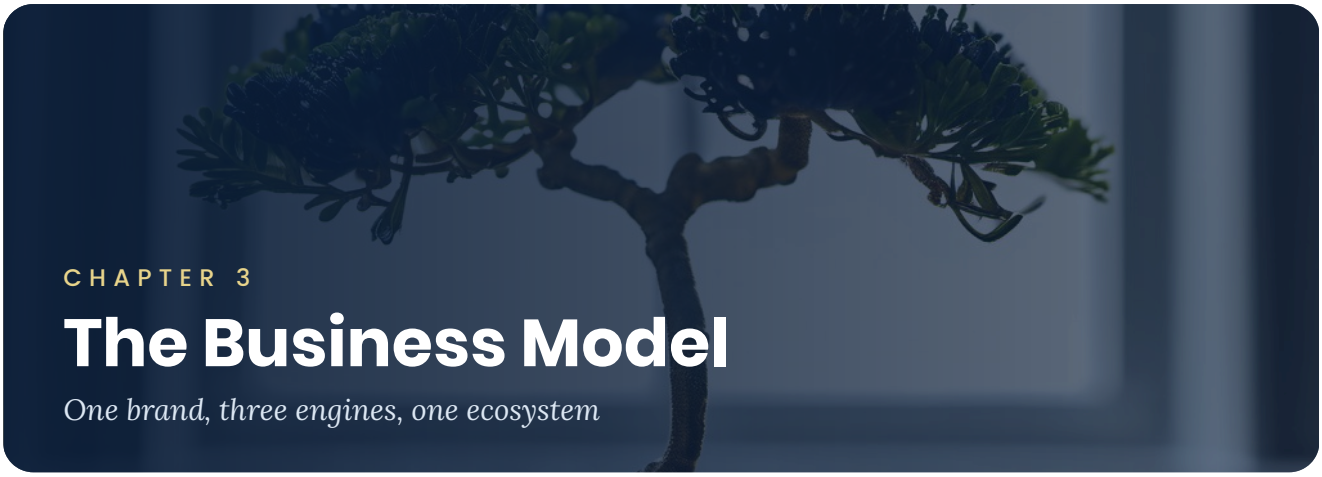

Revenue shrinks on its way to your pocket. The proportions here are a schematic, not a calculation.

Positioning, stated honestly

While you build your DPO qualifications, position every service as **documentation and compliance support**, never as legal representation or certified legal advice. Be transparent about your qualifications and the scope of each service, in the sales page, the proposal and the agreement. This is both an ethical line and a commercial one: clients who buy the right thing for the right reason become repeat clients.

☑ Before you go on

- [ ] I understand revenue is not profit.
- [ ] I will describe my services as documentation and compliance support only.
- [ ] I will not promise compliance, certification or fines avoided.
- [ ] I will treat every income figure in this book as an example.

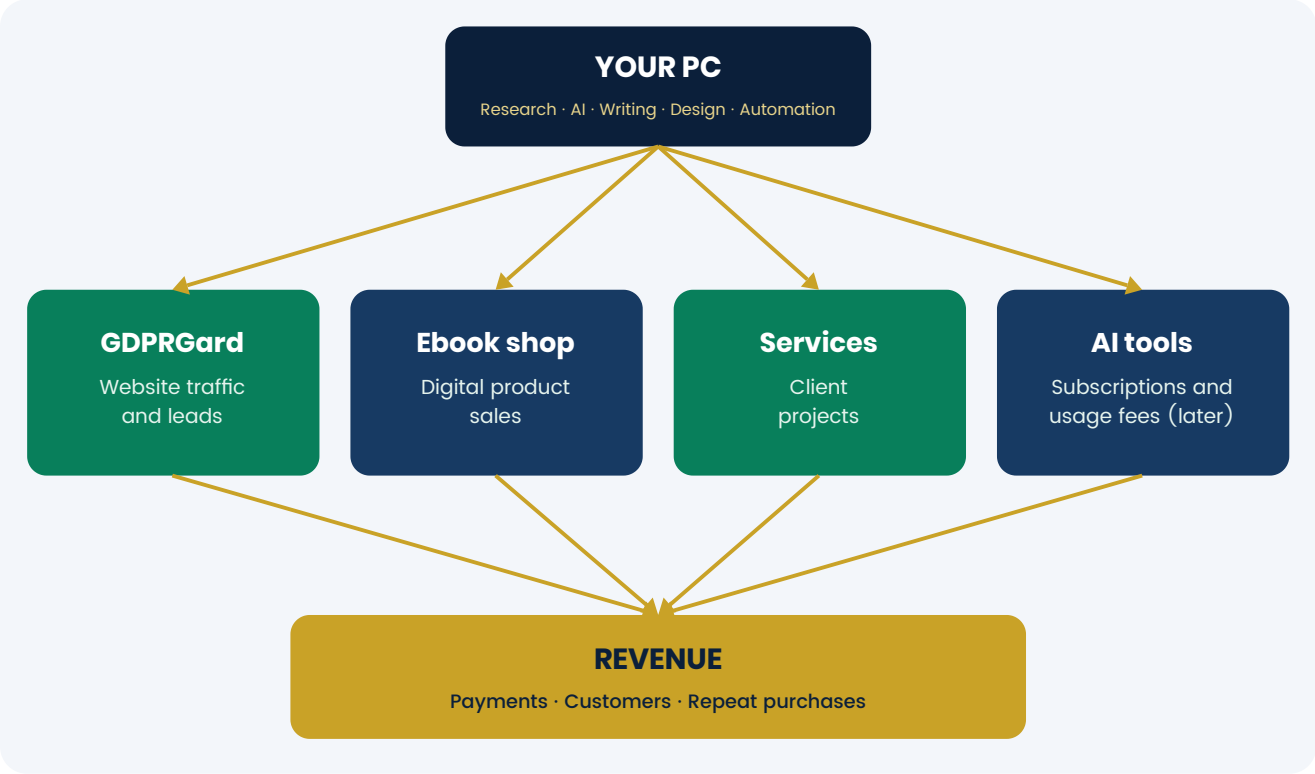

CHAPTER 3

The Business Model

One brand, three engines, one ecosystem

Instead of five unrelated side projects, the plan builds one small European digital consultancy under the GDPRGard brand, powered by AI tools for research, drafting and design, with digital products as a second revenue engine. Using one brand concentrates your cost, your marketing effort and your reputation in one place.

The ecosystem: one PC, one brand, four ways of earning, one revenue stream.

The target mix

60% Services
Higher-value client projects

30% Digital products
Ebooks, templates, toolkits

10% Recurring
Subscriptions and maintenance

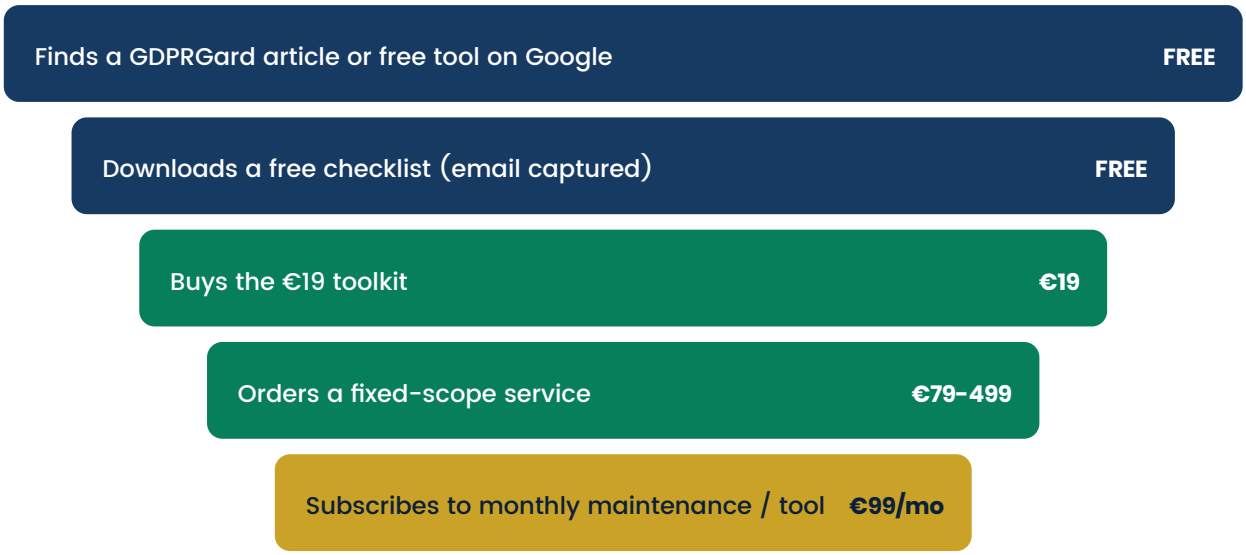

Target revenue proportions - not existing sales or guaranteed results.

Target revenue proportions once the business is established.

- **Services (60%)** - a few higher-value client projects can carry a month.
- **Digital products (30%)** - the same work, packaged once and sold repeatedly.
- **Recurring income (10%)** - maintenance packages first; a subscription only after demand is proven.

How one visitor becomes several sales

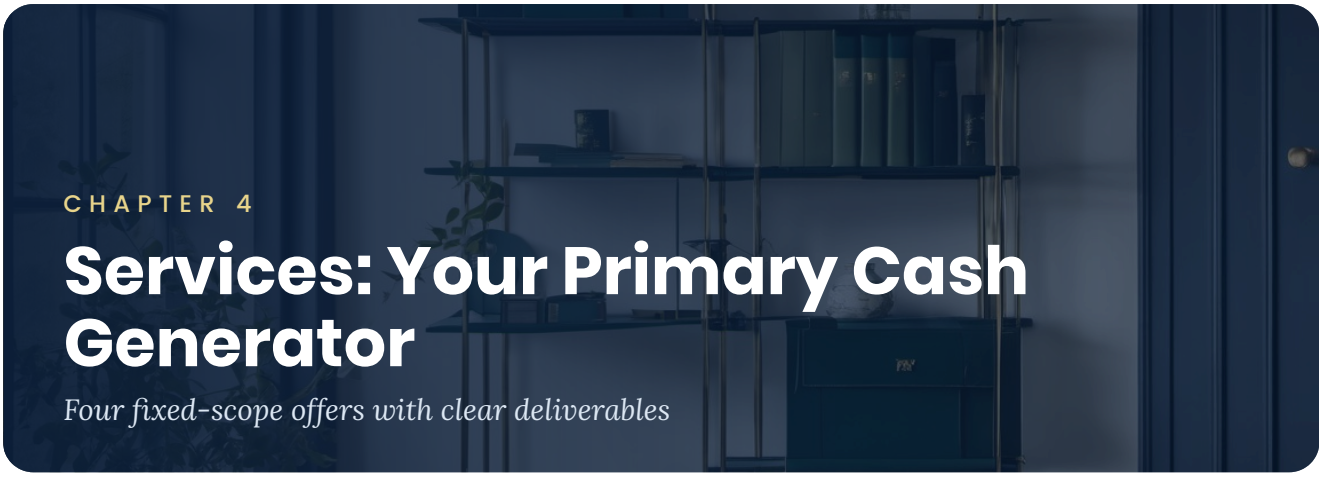

The businesses support one another. A person finds a GDPRGard article through Google, downloads a free checklist, discovers the €19 toolkit, later orders a documentation service, and eventually subscribes. Each step is a decision the customer makes only after the previous one proved useful.

The customer journey. Every step should be genuinely useful on its own.

A note on traffic

You have previously reported more than 5,000 monthly visitors to GDPRGard, with the free tools attracting much of that traffic. That figure comes from your own earlier reporting and is not verified here. If it holds, the larger opportunity is **conversion** (turning existing visitors into enquiries and buyers) rather than chasing more traffic.

CHAPTER 4

Services: Your Primary Cash Generator

Four fixed-scope offers with clear deliverables

Do not sell 'GDPR help'. Sell a clear outcome, with a fixed price and written deliverables. Fixed scope protects you from endless revisions and protects the client from vague promises. The four offers below form a ladder: each one leads naturally to the next.

OFFER 1 - ENTRY-LEVEL OFFER

Website Privacy Check

€79

INCLUDED

- Review of public-facing privacy information
- Check of the cookie notice and consent implementation
- Identification of obvious documentation gaps
- A prioritised findings report

HOW YOU DELIVER

1. Client fills a 10-minute intake form and signs the short agreement.
2. You review the public pages and cookie behaviour; record findings with screenshots.
3. Deliver a short prioritised report (high / medium / low) plus a next-steps page.
4. Offer a 15-minute walk-through and mention Offer 2.

Scope: One website, one language. No legal opinion and no technical penetration test.

OFFER 2 - DOCUMENTATION PACKAGE

Small Business Privacy Documentation Pack

€249

INCLUDED

- Privacy documentation gap assessment
- Data retention schedule template
- Data subject request workflow
- Data breach response checklist
- Implementation action plan

HOW YOU DELIVER

1. Intake questionnaire lists the tools, data types and teams.
2. You adapt your master templates to the client's real activities.
3. Deliver the pack as editable documents plus a one-page action plan.
4. One revision round, then close the project in writing.

Scope: One small business, agreed processing activities and one revision round.

OFFER 3 - CORE SERVICE

GDPR Operations Starter

€499

INCLUDED

- Initial processing-inventory workshop
- Documentation gap assessment
- Retention and data-subject-request workflows
- Incident escalation procedure
- Staff awareness checklist
- 30-day implementation roadmap

HOW YOU DELIVER

1. Kick-off workshop (video call) to map data and tools.
2. Draft documents and workflows within the agreed timeframe.
3. Review session, one revision round, handover.
4. Offer monthly maintenance (Offer 4).

Scope: Scope and deliverables agreed in writing. No guarantee of compliance certification.

OFFER 4 - RECURRING SERVICE

Privacy Documentation Maintenance

€99 / month

INCLUDED

- Monthly documentation review
- One monthly client consultation
- Template updates
- Action tracking
- Follow-up reminders

HOW YOU DELIVER

1. Set a hard monthly time cap for each client in the agreement.
2. Use a standard monthly checklist so every client is quick to serve.
3. Cap the number of maintenance clients to what your schedule can hold.

Scope: Limited scope and monthly capacity. Excludes formal DPO appointment.

Stay inside your competence

Avoid complex legal opinions, high-risk data protection impact assessments, and regulated-sector projects unless you have the appropriate expertise and supervision. Referring a client on is a professional act, not a lost sale.

☑ Offer checklist (finish in week 1)

- [ ] Each offer has a one-page description: who it is for, what is included, what is not, price, timeline.
- [ ] A service agreement and intake questionnaire exist for each offer.
- [ ] Scope limits (what is excluded) are written on the sales page.
- [ ] I can say in one sentence what each offer is NOT.

CHAPTER 5

Digital Products: Your Scalable Income

Build once, sell many times

Digital products let you earn from the same work repeatedly and give prospects a low-risk way to meet you before buying a service. They can be sold through GDPRGard and, where appropriate, through Amazon Kindle.

Product	Launch price	Role in the ladder
Data Retention Toolkit	€19	**First product to build.** Focused problem, fast to produce
DSAR Response Toolkit	€19	Handling data-subject access requests
GDPR Small Business Bundle	€29	Broader starter set
72-Hour Data Breach Response Kit	€29	Incident-readiness checklist and templates
AI Employee Usage Policy Pack	€19	Policy for staff use of AI tools
Complete Privacy Operations Bundle	€49	Everything above in one purchase

Product 1: The Data Retention Toolkit

Start here. It addresses a focused business problem, takes less time to develop than a full GDPR ebook, and complements the services you sell. Include:

- Data retention policy template
- Data retention schedule spreadsheet
- Data deletion checklist
- Review calendar
- Practical instructions
- Worked business examples

Templates need adapting

State plainly, inside the product and on the sales page, that templates must be adapted to the customer's actual legal obligations and processing activities. Retention periods in examples are illustrations, not legal requirements.

Product delivery checklist

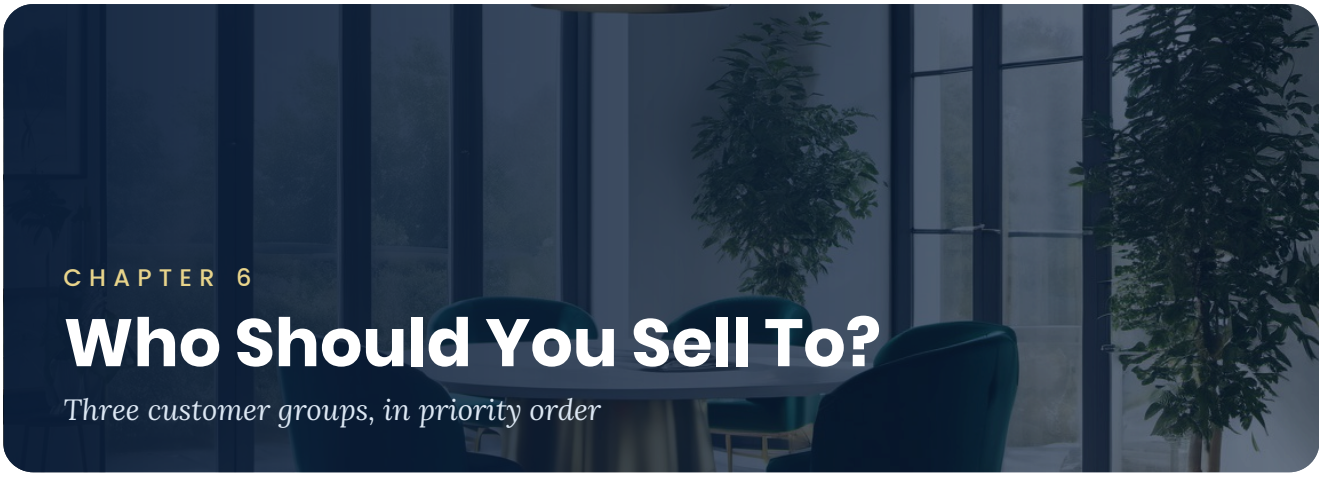

☑ Before you sell any product

- [ ] File opens correctly on desktop and phone.
- [ ] Disclaimer page included (not legal advice; adapt before use).
- [ ] Payment link tested end to end with a real small purchase.
- [ ] Delivery email arrives within minutes and the download works.
- [ ] Refund and contact details are visible.
- [ ] Version number and date are on the first page.

The future recurring product (not yet)

GDPRGard Business Toolkit - €19/month (proposed, not validated)

Downloadable templates, a retention calendar, DSAR tracking tools, breach-response resources, monthly updates and practical guidance. **Build this only after demand is proven.** Do not spend your first month developing a complicated software platform.

CHAPTER 6

Who Should You Sell To?

Three customer groups, in priority order

Do not target every European business. Start with three groups that process customer information, use many digital tools, and often need practical privacy operations. The GDPR also applies to small and medium-sized enterprises, although the specific obligations depend on what each business does and the risks involved.

1

Small e-commerce businesses

First priority. Online stores, Shopify merchants, small independent retailers, anyone collecting customer data. Best fit: Website Privacy Check and the Retention Toolkit.

2

Marketing agencies

Small agencies, email-marketing consultants, web designers, freelance marketers. Opportunity: documentation support and white-label educational resources.

3

Small SaaS businesses

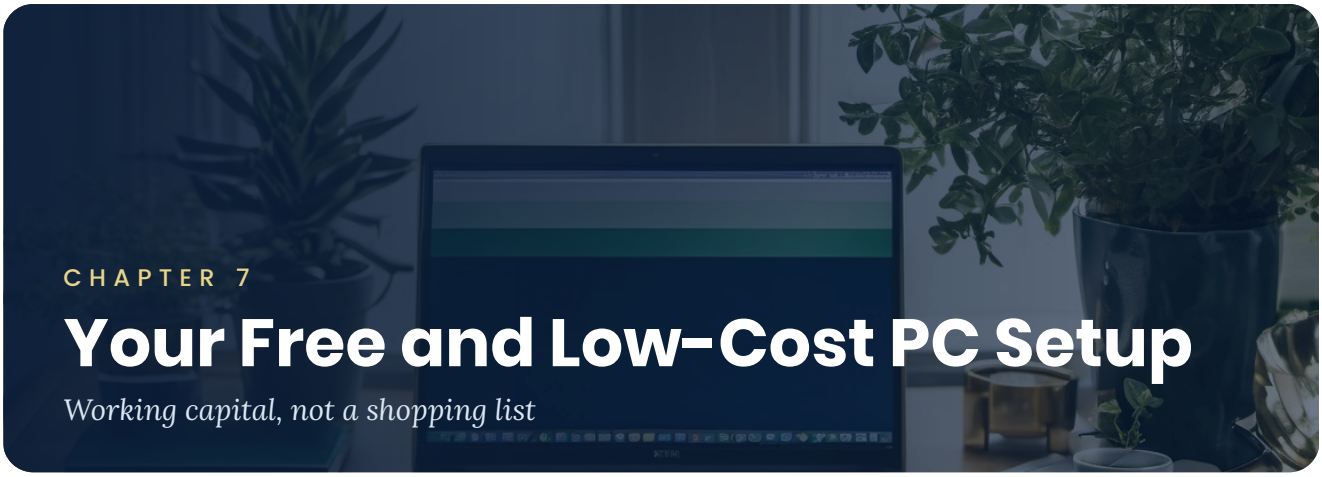

Software start-ups, web-app developers, small subscription platforms. Opportunity: vendor inventories, retention workflows, privacy operations.

Build a one-page customer profile for each group

Question	What to write down
Who exactly buys?	Founder, operations lead, marketing manager?
What do they already use?	Shop platform, email tool, analytics, forms, support desk
What do they worry about?	Customer requests, cookie banners, supplier contracts, staff mistakes
What would they pay for?	A fixed-price check, a ready pack, a monthly review
Where do you find them?	LinkedIn, Google Maps, shop directories, start-up lists, agencies

Look for fit, not volume

Fifty well-chosen prospects beat five hundred random ones. A prospect who uses several tools, collects customer data and has no visible privacy contact is a better lead than a large company with a legal department.

CHAPTER 7

Your Free and Low-Cost PC Setup

Working capital, not a shopping list

You do not need an expensive computer setup. Treat the €50 as **working capital**, not something to spend immediately. Start on free tiers and upgrade only when revenue justifies it.

Tool	Purpose	Initial budget
ChatGPT (or similar assistant)	Research, outlines, first drafts of content - always checked by you	€0
Canva	Product and ebook design, social graphics	€0
Google Sheets / Drive	Prospect list, orders, KPI dashboard, document storage	€0
WordPress (GDPRGard site)	Landing pages, blog, enquiry forms	Existing
Stripe	Payments and payment links	Transaction fees only
Google Search Console	SEO monitoring	€0
LinkedIn	Prospecting and visibility	€0
Make	Workflow automation (later, not week 1)	€0 initially

Check each tool's current terms

Free tiers, limits and fees change. Check each provider's current pricing and terms before relying on it, and check that any tool that touches client data is suitable for that use (see Appendix B on handling client information).

How to treat the €50

€0 spend on validation	up to €20	up to €30
research, outreach, product creation, organic marketing	domain / essential item	contingency

A budget with a cap, not a shopping list.

- **€0** - research, outreach, product creation, organic marketing.
- **Up to €20** - one essential domain or business-related expense, if truly needed.
- **Up to €30** - contingency.

> **Do not buy during validation**
>
> No advertising, no premium AI subscriptions, no expensive automation software, and no paid course. If a spending idea does not produce a customer in the next 30 days, it can wait.

CHAPTER 8

Your 30-Day Execution Plan

Four weeks, one target each

You have 3-4 hours a day: roughly 90-120 hours in the month. The rule: **70% of your time on activities that can generate revenue, 30% on building infrastructure**. The fastest way to fail is to spend all thirty days polishing.

WEEK 1 Days 1-7	**Build the business** One service. One product. One sales page. Target: 3 offers ready, payment + delivery tested
WEEK 2 Days 8-14	**Find first customers** 10 researched approaches a day + 3 LinkedIn posts Target: 50 prospects approached, 3-5 conversations
WEEK 3 Days 15-21	**Convert interest** Fixed-scope offers, objections into the landing page Target: 2-3 cumulative paying customers (ideal)
WEEK 4 Days 22-30	**Repeatable income** Standardise, automate delivery, offer maintenance Target: validated offers + repeatable process

The 30 days at a glance.

Week 1 (Days 1-7): Build the business

Day	Focus	Done when...
1	Confirm brand (GDPRGard). Write one-page descriptions for all offers. **Book a call with a Croatian accountant (Chapter 13).**	Four one-pagers exist; call is booked
2	Website Privacy Check: method, checklist, report template	You can complete a check on a practice site
3	Client intake questionnaire and service agreement drafts	Drafts ready for professional review

Day	Focus	Done when...
4	Data Retention Toolkit: policy template and retention schedule	Two core files finished
5	Toolkit: deletion checklist, review calendar, guide, worked examples	Toolkit complete and proofread
6	Landing pages, enquiry forms, Stripe payment link, delivery email	Pages live; links work
7	Full test: buy your own product, receive it, submit an enquiry	Payment and delivery tested

☑ Week 1 target: three complete offers ready to sell

- [ ] Website Privacy Check (€79) ready
- [ ] Documentation Pack (€249) ready
- [ ] Data Retention Toolkit (€19) ready
- [ ] Enquiry form and payment/delivery workflow tested
- [ ] Intake questionnaire and service agreement prepared

Week 2 (Days 8-14): Find your first customers

Start selling, not just publishing. Identify 50 relevant businesses and contact 10 carefully chosen prospects each working day.

Day	Focus	Done when...
8	Build the 50-prospect list (Chapter 10); first 10 approaches	List and tracker live
9	10 approaches; LinkedIn post 1	Messages logged
10	10 approaches; publish the free retention checklist	Checklist downloadable
11	10 approaches; LinkedIn post 2	Follow-ups scheduled
12	Publish one useful GDPRGard article; follow-ups	Article live and shared
13	10 approaches; LinkedIn post 3; first sales conversations	Notes taken
14	Follow up; review replies; adjust the message	Weekly review done

☑ Week 2 target

- [ ] 50 qualified prospects approached
- [ ] 3-5 meaningful conversations
- [ ] Ideally the first sale
- [ ] Three LinkedIn posts and one article published

Week 3 (Days 15–21): Convert interest into revenue

- Continue with 10 personalised approaches per working day.
- Offer fixed-scope packages rather than custom quotes for everything.
- Ask prospects about their biggest privacy documentation problems and write the answers down word for word.
- Improve the landing page using real objections.
- Launch the second digital product - the one your conversations suggest.
- Request honest feedback from every customer and every lost prospect who will talk.

☑ Week 3 target

- [ ] 2–3 cumulative paying customers (ideal, not guaranteed)
- [ ] Clear evidence of which offer sells best
- [ ] Objection list written and answered on the page

Week 4 (Days 22–30): Establish repeatable income

- Standardise client onboarding and delivery with checklists.
- Create reusable templates for repetitive work.
- Automate digital product delivery and purchase confirmation emails (Stripe + Make or the site's own tools).
- Offer maintenance packages to suitable customers.
- Publish a second SEO article.
- Review revenue, enquiries, conversion and feedback; decide the next 30 days.

☑ Week 4 target: a functioning small business

- [ ] Validated offers and at least some paying customers
- [ ] Delivery and follow-up are written down
- [ ] Repeatable acquisition process in place
- [ ] Month-1 numbers recorded (Chapter 12)

CHAPTER 9

Your Daily PC Working Schedule

3.5 hours that add up

A schedule matters because the tasks that feel safest (designing, tweaking, reading) are rarely the ones that bring customers. This split puts customer acquisition first, every day.

Customer acquisition	60 minutes
Client work & delivery	60 minutes
Digital products	45 minutes
Marketing & SEO	30 minutes
Dashboard	15 minutes

Total 3 h 30 m. On client-delivery days, delivery comes before creating more products.

The daily operating system. Total: 3 h 30 m.

Block	Minutes	What you do
Customer acquisition	60	Find prospects, send personalised messages, follow up
Client work and delivery	60	Prepare reports, documents and customer deliverables
Digital products	45	Create and improve ebooks, templates and toolkits
Marketing and SEO	30	LinkedIn, articles, website improvements
Business dashboard	15	Enter enquiries, sales, costs and next actions

Delivery first

On days with client work, prioritise delivery over creating more products. A late deliverable damages your reputation faster than a missing product.

A sample day

Time	Task
09:00	Dashboard (5 min check) then prospect research
09:05	Personalised messages, replies, follow-ups
10:00	Client work or the next scheduled deliverable
11:00	Product work: draft, edit or package
11:45	LinkedIn post or article section, website fix
12:15	Dashboard: log numbers, set tomorrow's three tasks

☑ End-of-day routine

- [ ] Today's messages sent and logged
- [ ] Replies answered
- [ ] Numbers entered
- [ ] Tomorrow's three tasks written down
- [ ] One asset improved (template, page, article or product)

CHAPTER 10

Your Customer Acquisition System

A beautiful website does not sell by itself

This is probably the most important chapter. You need a consistent, repeatable way to reach potential customers. The system below needs only a browser, a spreadsheet and about an hour a day.

Where to find customers

Channel	What to do
LinkedIn	Find founders and e-commerce owners; comment, then connect
Google Maps	Identify small businesses that have websites
Shopify stores	Find independent online retailers
European start-up directories	Find small software companies
Web design agencies	Build referral partnerships
GDPRGard SEO	Attract people already searching for privacy help

The funnel in numbers

Activity targets, not guaranteed conversion rates.

Weekly acquisition targets. Activity targets, not guaranteed conversion rates.

Your outreach message

Use a personalised approach. **Never tell a business it is violating the GDPR simply because you noticed something on its website.** You may be wrong, and it is a poor way to begin a relationship.

> *Hello,*
>
> *I came across your business while researching independent European online businesses.*
>
> *I work on practical GDPR documentation and privacy operations support for small businesses, helping them organise areas such as data retention, privacy documentation, data subject requests and breach response procedures.*
>
> *I offer a fixed-scope Website Privacy Check that identifies visible documentation gaps and provides a prioritised action list.*
>
> *Would this be something your business might find useful? I would be happy to share the details.*
>
> *Kind regards,*
> *Zirlandia*
> *GDPRGard*

Check the rules before you send

Send only relevant, individually researched messages. Check the electronic marketing and privacy rules that apply to the recipient's country before contacting prospects, particularly for unsolicited commercial email. Be transparent about who you are, make it easy to say no, keep a do-not-contact list, and record where each contact's details came from. Rules differ between countries and between B2B and B2C; if you are unsure, ask a qualified adviser.

Weekly acquisition targets

Activity	Weekly target
Researched prospects	50
Personalised approaches	40-50
LinkedIn posts	3
SEO articles	1
Referral partnership approaches	5
Follow-ups	15-20

The follow-up that gets answered

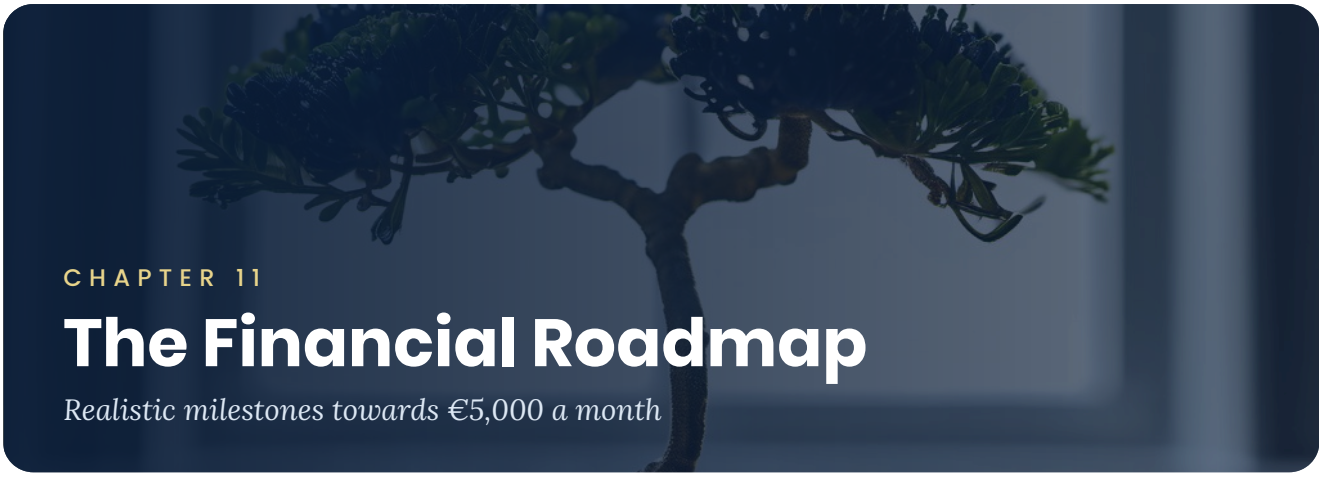

> *Hello [Name], a short follow-up on my note about a Website Privacy Check for [business]. If it is not relevant right now, no problem at all - just let me know and I will not write again. If useful, I can send a one-page example of what the report looks like.*
>
> *Kind regards, Zirlandia*

A short discovery-call script

- **Context:** 'What tools do you use to collect or store customer information?'
- **Pain:** 'What happens today when a customer asks for their data or asks you to delete it?'
- **Gap:** 'Where is your privacy information kept, and who last reviewed it?'
- **Fit:** Match to the Check, the Pack or the Starter. Refer on if it is beyond your scope.
- **Next step:** Send the fixed-scope proposal within 24 hours.

Answering common objections

Objection	A truthful response
'We are too small for GDPR.'	The GDPR also applies to small businesses; what applies in detail depends on what you do with personal data. A check shows what is visible.
'We already have a policy.'	Good - the check looks at whether what is published matches what you actually do.
'Too expensive.'	It is a fixed scope with fixed deliverables. If the Check is too much, the €19 toolkit is the starting point.
'Can you guarantee we are compliant?'	No one can honestly guarantee that. I provide documentation and a prioritised action list, not certification or legal advice.

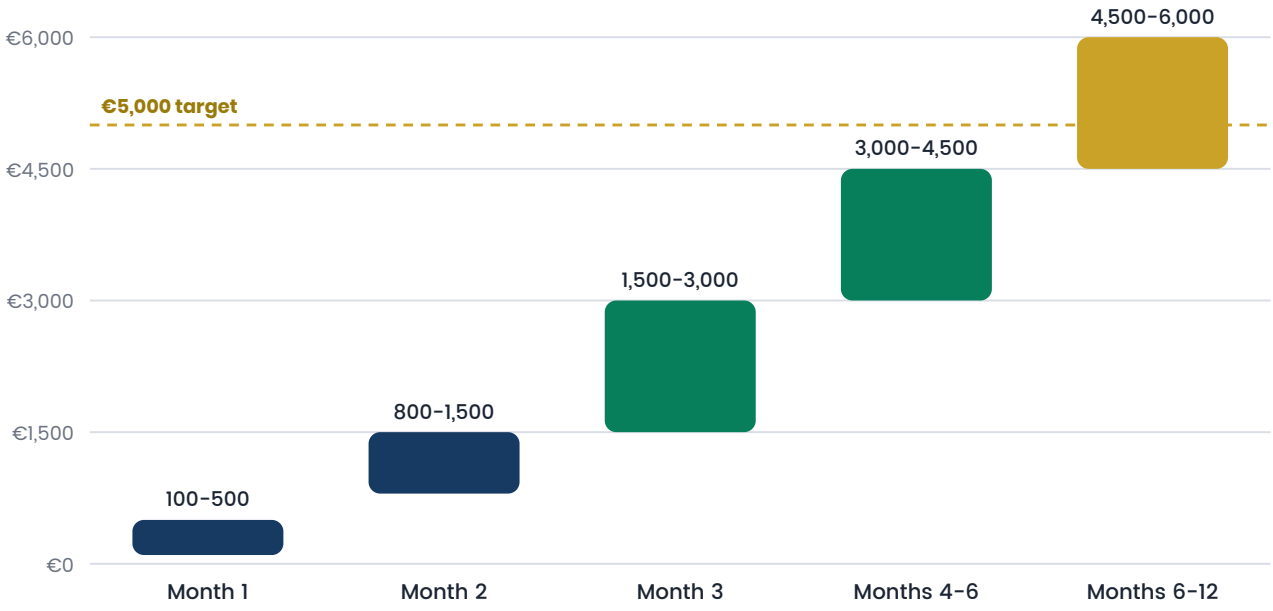

CHAPTER 11

The Financial Roadmap

Realistic milestones towards €5,000 a month

Illustrative only

Every figure in this chapter is an example for planning. Reaching €5,000 may take longer than the chart suggests, especially if customer acquisition is slower than expected. The first 30 days are for validation.

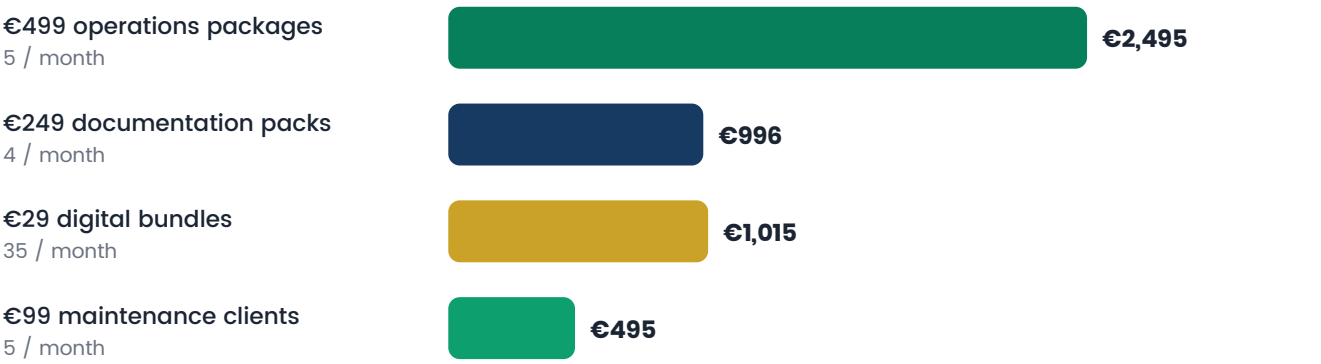

Illustrative monthly revenue ranges by stage. Planning ranges, not earnings forecasts.

What €5,000 could look like

Revenue source	Monthly quantity	Revenue
€499 operations packages	5	€2,495
€249 documentation packs	4	€996
€29 digital bundles	35	€1,015

Revenue source	Monthly quantity	Revenue
€99 maintenance clients	5	€495
Total		**€5,001**

Illustrative total **€5,001 / month**

One possible revenue mix once demand, a customer base and capacity are established.

Notice what this model does **not** need: thousands of ebook sales. It relies primarily on valuable client services supported by repeatable digital products. It is a possible mix, not a prediction for your first few months.

Three illustrative monthly scenarios

To keep expectations realistic, the table below shows what small, mid and larger months might look like with the plan's own prices. They are arithmetic examples, not forecasts.

Offer	Low month	Mid month	Stronger month
Website Privacy Check (€79)	3 = €237	4 = €316	4 = €316
Documentation Pack (€249)	1 = €249	2 = €498	3 = €747
Operations Starter (€499)	-	2 = €998	3 = €1,497
Maintenance (€99/mo)	-	2 = €198	3 = €297
Digital bundles (€19-29)	6 x €19 = €114	8 x €29 = €232	15 x €29 = €435
Revenue	**€600**	**€2,242**	**€3,292**

Revenue, profit and the real number

Actual profit would be lower after platform fees, refunds, tools, accounting costs, contributions and taxes. Open a column in your tracker called **kept** and fill it in honestly after each month. Chapter 13 explains why your Croatian registration form changes this number.

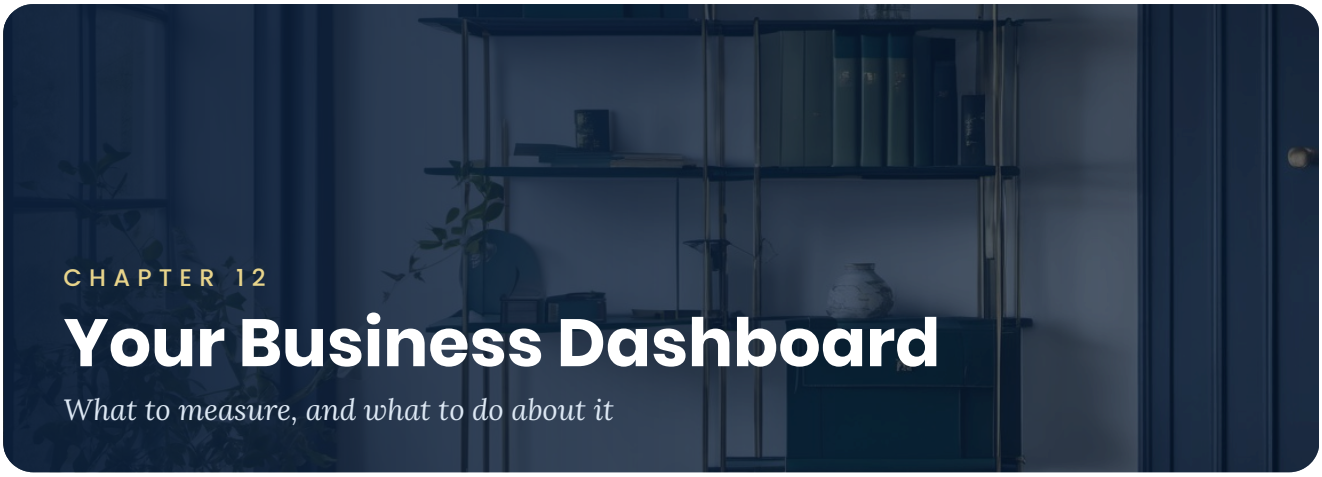

One number to watch: €60,000

€5,000 a month is €60,000 a year. Croatia's flat-rate (pausalni) scheme and the small-business VAT exemption are both reported to be capped at €60,000 of receipts. Reaching your target could therefore change your tax and VAT position. Discuss this with your accountant **early**, not after you cross the line (see Chapter 13).

A simple monthly money routine

☑ Last day of every month

- [ ] Record revenue by offer
- [ ] Record fees, refunds and expenses
- [ ] Set aside the amount your accountant advises for contributions and tax
- [ ] Compare with the milestone ranges
- [ ] Choose the single biggest lever for next month

CHAPTER 12

Your Business Dashboard

What to measure, and what to do about it

One spreadsheet is enough to run the whole business. The aim is to see every week where the pipeline is thin, before the bank balance shows it.

WEEKLY DASHBOARD - targets for the first 30 days

Qualified prospects	Sales conversations	Paying clients
50 / week	**3-5 / week**	**2-3 in month 1**

Digital products	Recurring clients	Month-1 revenue
2 live	**1-2 early**	**€100-500**

Fill the actuals in your tracker every week; compare to target; act on the weakest number.

Targets for the first 30 days. Your tracker adds an 'actual' column.

KPI	Initial target
Qualified prospects	50 / week
Sales conversations	3-5 / week
Paying clients	2-3 in the first month
Digital products	2
Monthly recurring clients	1-2 initially
First-month revenue	€100-500
Longer-term revenue target	€5,000+ / month

The first-month revenue target is deliberately modest. Your priority is proving that strangers will pay for what you sell.

Set up your tracker (four tabs)

Tab	Columns
Prospects	Business, website, segment, country, source, date contacted, channel, status, next action, next date, notes
Orders	Date, customer, offer, price, fees, refund, payment status, delivery date, feedback
Weekly KPIs	Week, prospects, approaches, replies, conversations, orders, revenue, hours, notes
Costs	Date, item, amount, category, receipt saved

What to measure every week

- Number of qualified prospects, replies, sales conversations and paid orders.
- Average revenue per customer.
- Time spent delivering each service.
- Product conversion rate (visitors to buyers).
- Repeat and recurring revenue.

Reading the numbers

If you see...	Investigate first
Few replies	Targeting and the first message; is the subject relevant to this business?
Replies but no calls	The offer's clarity and the call to action
Calls but no purchases	Price, scope, proof and trust signals before building anything new
Lots of enquiries, no purchases	The offer, pricing and trust signals - not another product
Sales but exhausted	Scope creep; delivery time per offer; raise price or tighten scope
One-off buyers only	No maintenance offer made; follow-up system missing

CHAPTER 13

Setting Up Legally in Croatia

General guidance, and what must be confirmed

Read this before collecting any payment

Because the business would operate from Croatia, do not start collecting business payments before checking the appropriate registration, tax and residence conditions. This chapter summarises what official and other sources said when checked on **31 October 2026**. It is not tax, accounting or immigration advice. Rules, thresholds and amounts change, and your own status decides which route applies. A Croatian accountant and the competent authority must confirm your situation.

1. **Confirm your status**
   Citizenship / EU-EEA / third-country, and registered residence in Croatia
2. **Ask an accountant**
   Obrt vs other form; is flat-rate (paušal) right for your income and clients?
3. **Register**
   e-Obrt online (where eligible) or in person at the competent office
4. **Notify & set up**
   Tax Administration within 8 days; HZMO/HZZO data flows; bank account, invoicing
5. **Start collecting payments**
   Only after the steps above are confirmed

A safe order of operations before your first invoice.

A. General guidance from official sources

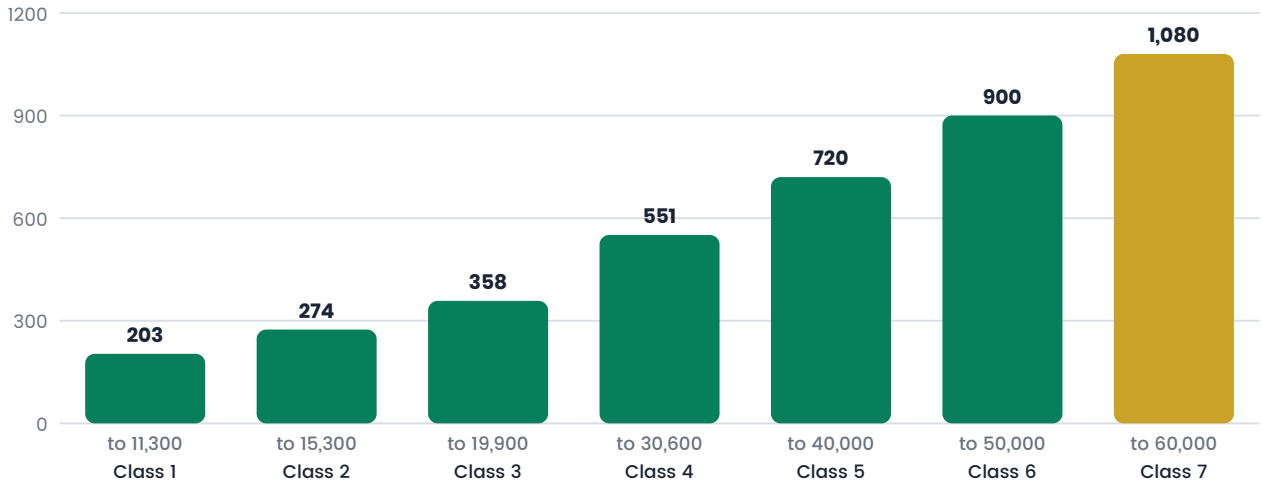

Topic	What the official source says	Source
Registration routes	A craft (obrt) can be opened via START (Croatian citizens with residence), e-Obrt (Croatian citizens and foreigners with permanent or temporary residence in Croatia) or in person (Croatian, EU/EEA and foreign citizens).	gov.hr: Opening a craft in Croatia
Residence condition	Registered residence or stay in Croatia is a condition for registering a new craft.	gov.hr
Third-country nationals	Citizens of countries outside the EU/EEA also need a work permit and a valid residence permit.	gov.hr
Fee	No registration fee is currently required. Recognition of foreign vocational qualifications may require an administrative fee.	gov.hr
Documents	ID or passport copy; proof of premises if the craft needs them; qualifications for tied crafts; special health proof for food crafts.	gov.hr
After registration	Tax Administration notification within 8 days of starting; data goes to the health insurance fund (HZZO) within 24 hours.	gov.hr
Start date	If you register without a start date, you must begin the activity within one year.	gov.hr
Free vs tied crafts	Some crafts require specified qualifications. The type of your activity must be checked.	gov.hr / HOK

B. Figures reported by secondary sources (verify before relying on them)

The sources below are professional-information websites, not the authorities themselves. Treat the numbers as a starting point for your accountant conversation.

Topic	Reported 2026 information	Status
Flat-rate (pausalni) obrt limit	Total annual receipts up to €60,000; lump-sum income tax by class of receipts.	Confirm with Porezna uprava
Flat-rate tax classes	Seven classes; annual tax from €203.40 (receipts to €11,300) to €1,080.00 (receipts €50,000.01-60,000). Paid quarterly.	Confirm; amounts change
First-year classification	In the first year, the class is based on the receipts you declare on the registration form (RPO) filed within 8 days of opening.	Confirm
Contributions	Reported at about €290.98 a month in 2026 (base €797.20); different if the craft is run alongside employment.	Confirm with HZMO/HZZO and accountant

Topic	Reported 2026 information	Status
Draft law changes	A draft new Income Tax Act published for consultation on 31 July 2026 proposes higher flat-rate amounts for the top classes from 2027. The source states this is not the final position.	Draft - not final
VAT	Small-business exemption reported at €60,000 of annual turnover (VAT Act, as amended in NN 152/2024). Exemption ends from the point the threshold is passed, not at year-end.	Confirm with accountant

Annual flat-rate income tax (EUR) by class of previous-year receipts - figures reported for 2026; confirm with Porezna uprava.

Reported 2026 flat-rate tax classes. Confirm all figures with the Tax Administration.

C. Questions an accountant or authority must answer for you

☑ Take this list to your accountant meeting

- [ ] Which registration route applies to my citizenship, residence and work status? Do I need any permit?
- [ ] Is an obrt the right form, or would another form suit services plus digital products and my income target?
- [ ] Is flat-rate taxation suitable, given €60,000 of annual receipts is the reported cap and my target is €5,000 a month?
- [ ] What activity description fits GDPR documentation support, ebooks and digital downloads? Is any part regulated?
- [ ] What contributions will I pay in my situation, and does any current employment change them?
- [ ] What is my VAT position for sales to Croatian consumers, EU businesses and EU consumers? Where is each sale taxed?
- [ ] How do I invoice foreign customers, and which payment-platform payouts count as receipts and when?
- [ ] Which records must I keep, for how long, and in what form?
- [ ] Do I need to register anything for my own data processing (customer records, mailing list, analytics)?
- [ ] What happens if I cross a threshold part-way through a year?

D. Your own business must comply too

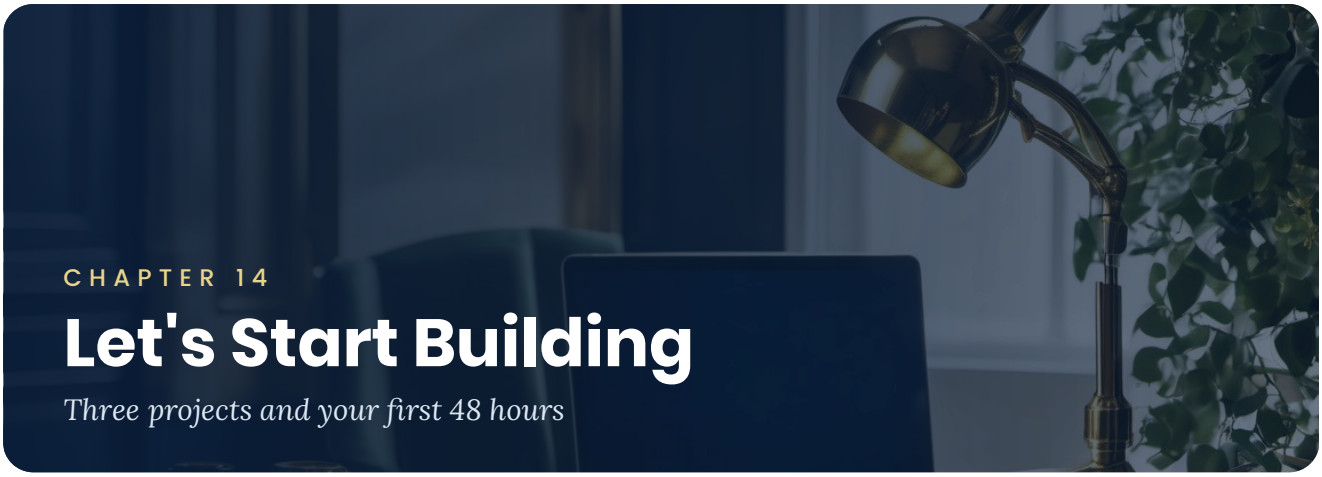

A privacy consultant who ignores privacy looks unprofessional. From day one, give your own site a clear privacy notice and cookie approach, keep a simple record of the personal data you process and why, agree confidentiality in writing with clients, and check that tools handling client information are suitable. Keep client files only as long as you need them and say how long.

E. Official starting points

- **gov.hr** - Opening a craft in Croatia (routes, documents, post-registration steps).
- **Croatian Chamber of Trades (HOK)** - guidance for craftspeople, starter guide and free business advice.
- **Tax Administration (Porezna uprava)** - tax classes, forms, deadlines, VAT.
- **Ministry of the Interior / local police administration** - residence and work permits.
- **HZMO and HZZO** - pension and health contributions.

Bring documents, not guesses

Before the meeting, write down your citizenship, where you are registered as resident, whether you are employed, what you plan to sell and to whom, and your expected income range. A precise question gets a precise answer.

CHAPTER 14

Let's Start Building

Three projects and your first 48 hours

Now the plan becomes work. Three concrete deliverables, in this order:

1

GDPRGard sales system

Priority 1. Service landing pages, pricing, enquiry funnel and the customer-acquisition system.

2

First digital product

The professional Data Retention Toolkit with editable templates and a practical guide.

3

Business control centre

Revenue tracker, prospect database, customer pipeline and the daily activity dashboard.

A brand decision

Should the whole business live under GDPRGard.eu, or should you create a separate consultancy brand and keep GDPRGard as the product platform? The recommendation in this plan is **GDPRGard as the main brand**: it keeps cost and marketing effort in one place and builds on the traffic and trust that already exist. Revisit the question only if a clearly different audience appears.

Your first 48 hours

☑ Hour-by-hour starter list

- [ ] Book the accountant meeting and write the questions from Chapter 13.
- [ ] Create the tracker spreadsheet with four tabs (Chapter 12).
- [ ] Write the four offer one-pagers, with exclusions.
- [ ] Draft the Website Privacy Check method and report template.
- [ ] Draft the intake questionnaire and service agreement; schedule a professional review.
- [ ] List 20 prospects that fit one customer group.
- [ ] Send your first five personalised messages - only after confirming the contact rules for each country.
- [ ] Decide the one thing you will measure daily.

> *The ambition is not to earn a few euros doing surveys. It is to build an actual digital business: with customers, products, repeatable sales and income that can grow – honestly, one customer at a time.*

A final word on expectations

Some weeks nothing will happen, and that is normal. The business does not depend on any single message or any single day; it depends on doing the same useful things for thirty days and then looking at the numbers without flattery. If the numbers say an offer does not sell, change the offer. If they say it does, do more of it.

APPENDIX

Appendix A: Ready-to-Use Messages and Posts

Adapt every one to the person you are writing to

A1. Reply to someone who asks for details

> *Thank you for getting back to me. The Website Privacy Check covers one website in one language: a review of the public privacy information and cookie notice, with a prioritised list of visible documentation gaps. It is €79, delivered within [X] working days. It is not a legal opinion or a technical test. Would you like me to send the short intake form?*

A2. After a call: proposal email

> *Thank you for your time today. As discussed: [offer], including [deliverables]. Not included: [exclusions]. Price: EUR [x]. Timeline: [x]. One revision round is included. If you would like to proceed, reply to this message and I will send the agreement and payment link.*

A3. Asking for feedback

> *Thank you for working with me. Two quick questions: what was most useful, and what would have made it better? May I quote your answer on my site, with your name and role, or anonymously, or not at all?*

A4. Ten LinkedIn post ideas

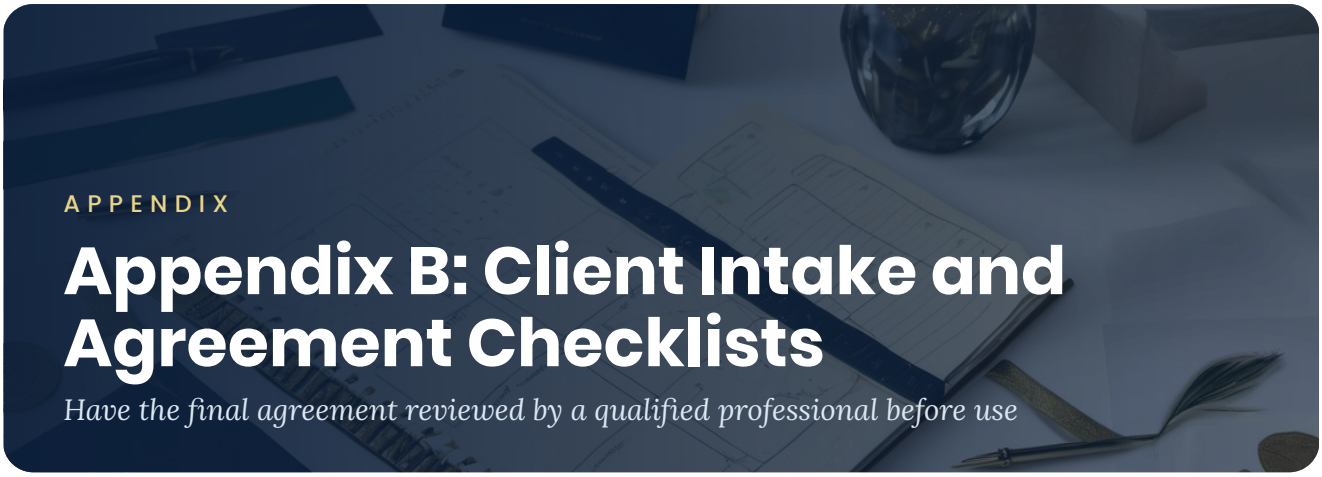

- What a cookie banner can and cannot do (educational, no accusations)
- Five questions every small shop should be able to answer about customer data
- A data retention schedule in plain words
- What to do when a customer asks you to delete their data
- The first hour after finding a data breach
- Why staff AI-tool use needs a simple policy
- A before/after of a clearer privacy page (anonymised)
- What I learned reviewing small websites this week (no names)

- Checklist: onboarding a new software supplier
- What documentation support is - and is not

A5. Article topics that match your products

- Data retention for small online shops
- How to respond to a data subject access request
- Breach response in 72 hours: a checklist
- An AI usage policy for small teams
- Privacy pages for agencies and their clients

> **Keep posts honest**
> Educational content should explain, not scare. Avoid claiming specific fines, cases or statistics unless you have checked the original source and can link to it.

APPENDIX

Appendix B: Client Intake and Agreement Checklists

Have the final agreement reviewed by a qualified professional before use

B1. Intake questionnaire

☑ Ask every client

- [ ] Business name, website(s), country, contact person
- [ ] Which offer and what goal
- [ ] What personal data do you collect (customers, staff, suppliers)?
- [ ] Which tools do you use (shop, email, analytics, payments, support)?
- [ ] Who has access to the data? Do any suppliers process it for you?
- [ ] How long do you keep different kinds of data today?
- [ ] Existing policies and documents
- [ ] Any previous complaint, request or incident
- [ ] Preferred timeline and the person who approves the deliverable

B2. Service agreement - points to cover

☑ Draft with a professional

- [ ] Parties and description of the service
- [ ] Deliverables and what is excluded
- [ ] Statement that the service is documentation and compliance support, not legal advice or certification
- [ ] Price, payment terms and invoicing details
- [ ] Timeline and number of revisions
- [ ] Client's responsibilities and information to be supplied
- [ ] Confidentiality and how client information is handled and deleted
- [ ] Limitation of liability and governing law (to be advised)
- [ ] Termination, cancellation and refunds

B3. Delivery checklist

☑ Before sending any deliverable

- [ ] Reviewed against the agreed scope
- [ ] Client's name and business details correct
- [ ] Disclaimer included
- [ ] Examples and figures are labelled as illustrative
- [ ] File format opens on the client's device
- [ ] Delivery email states what to do next

B4. Handling client information

- Ask only for what you need.
- Store client files in a protected place and share by secure link, not by open attachment where avoidable.
- Do not paste client data into tools unless the tool's terms and settings allow it and the client has agreed.
- Delete or return client material at the end of the engagement, as agreed.

APPENDIX

Appendix C: Weekly Review Sheet

Fifteen minutes every Friday

Question	This week	Next week's action
Prospects researched?		
Approaches sent?		
Replies / conversations?		
Orders and revenue?		
Hours spent delivering?		
Best-performing message or post?		
Biggest objection heard?		
One thing to stop doing?		
One asset improved?
